The ever-increasing environmental awareness in society, be it about protecting sensitive surfaces or reducing impact on humans and animals, is also moving more and more into the construction sector. Bohlen & Doyen recognised this development early on and was the first provider in the German market to introduce the environmentally friendly and efficient horizontal drilling technique for the construction of supply and drain pipes as well as cable protection ducts, setting a milestone in civil engineering.

Our range of services:
• Renovation of existing pipelines
• Installation of horizontal filter wells and drains
• Horizontal drilling of all dimensions
• Landings (transition from water to land)
• Installation of pipeline in tunnels

Our strengths:
• Our flexibility enables the successful implementation of complex infrastructure works as well as entire projects – incl. underground and pipeline construction, comprehensive planning – for customers in the supply and disposal industry, or the creation of just the horizontal well as a sub-contractor of other construction companies.
• We are the ideal partner for energy suppliers, planning and engineering companies as well as contracting clients from the field of underground and pipeline construction.
• As pioneers of this technology, we are constantly striving to provide improvements and new developments in order to, for example, meet the customer’s ecological requirements, too.

The benefits for our customers:
• A wide range of offers from mini to maxi drilling systems (4t – 250t retraction force)
• Europe-wide operability
• Extensive cross-sector experience; in particular, in the gas and oil industry
• Certified according to DVGW, ISO 9001:2008 as well as SCC and ISO 14001:2004 + Cor 1:2009
